

PROJECT SUMMARY

Bayview Demolition Services continues its Southern California partnership with Dome Construction by selectively demolishing a section of a Biotech Laboratory that will be turned into a Sustainable Meat Laboratory. Our scope of work started with stripping drywall to assist MEP subcontractors with their safe-off. The MEPs had to be carefully removed as adjacent lines fed parts of the building that were not in the scope of work. After the demolition of the wall studs and ceilings, we removed the existing epoxy flooring and concrete slab to allow the installation of a thicker slab for the new equipment.
