

PROJECT SUMMARY

This project of general contractor TRC, located in San Francisco, was completed by Bayview Environmental and worth over \$1,000,000. The power plant contained 1,002,000 square feet of property with a 206-megawatt, natural gas burning steam turbine and three 52-megawatt peaking power diesel generators, as well as tanks for storing liquid fuel. Our employees performed extensive hazardous material remediation inside these large tanks, removing the residue that had accumulated from the plant's operations: with the main hazardous materials being polycyclic aromatic hydrocarbons (PAHs) and volatile organic compounds (VOCs). The tanks were subsequently pressure-washed to complete the cleaning. The focus then moved to the tank exteriors, where the Bayview team handled the removal and remediation of thermal system insulation.

INDUSTRY

- Industrial
- ↳ Power: Fossil Fuels
- ↳ Power: Natural Gas
